

# GitHub Account (Online/Remote Repository) and Push the code to Remote/Online Repository

## Steps:

1) Visit:  
<https://github.com/login>

2)  
Create Account & Login:

3)  
Create Repository on GitHub

4) Create Access Token in your GitHub Account

5)  
Push the code/script to Repository

Steps to Push the code/commands:

```
git init
git status
git add .
git commit -m "first commit"
git status
git branch -M main
git remote add origin <url of your remote repository>
git push -u origin main
```

(if you are asked credentials, provide your github account login ID and your access token generated earlier)
